CAM EMERGENCY PROCEDURES
TORNADO/WINDSTORM

If a tornado watch is issued by the National Weather Service the following actions should be taken.

1. Monitor radio stations, such as the National Weather Service (weather band) at 162.475 MHz-FM for information and updates on the storm.
2. Be prepared for the possibility of evacuation to the indoor shelter areas. Know the location of the indoor shelter areas: a) the Auditorium; b) the Lecture Hall; c) The Medieval Gallery (G-105); d) the Conference Room.

Note: the mobile emergency supply storage lockers will be moved to designated indoor shelter areas by Security staff.

If a tornado warning is issued (meaning a tornado actually has been sighted in the area) follow these instructions as well.

1. Secure doors and windows. Keep some windows slightly open on the side of the building opposite the direction of the approaching tornado, as an attempt to equalize the indoor/outdoor air pressure.
2. Evacuate to the indoor shelter areas.
3. Remain in the shelter area until Security reports that the warning has been lifted, and it is safe to move about.

Note: gas lines will be switched off by Maintenance staff.
